LinkedIn: www.linkedin.com/in/harsh-jani-907b5b312

Education:

Class X - 98.20 pr	Dholakiya Schools (2019 - 2020)
Class XII - 86.69 pr	Swastik School Of Science (2021 - 2022)
Bachelor's (Computer Engineering) - Current CPI – 8.33	Marwadi University (2022 – 2026)

Experience:

Azilen Technologies - Software Engineer Trainee. | Jan 2026

- root causes of failures and ensuring fixes did not break existing functionality
- Reduced token-management database overhead by shifting runtime token controls to Redis.
- Implemented event-driven asynchronous email notifications for order and account workflows.
- Multi-tenant migration introduced risk of data inconsistency and rollout failures.
- Executed phased Flyway migrations with validation checkpoints and rollback-safe sequencing.

Projects:

ML Powered Grocery Web-App | React.js, SpringBoot, Python, Flask, Docker, MySQL, Redis

- Architected a **scalable Java-based microservices** backend for a grocery e-commerce platform with independently deployable microservices.
- Implemented **JWT-based authentication with role-based authorization** to secure customer and admin APIs and protect transactional data.
- Built **data-driven personalization** using Apriori-based product recommendations and sentiment analysis on user reviews to enhance relevance and conversion.

TermScope AI | Python, FLask, Tesseract OCR, React.js,Langchain, Groq API, FAISS

- Built a production-ready RAG pipeline using FAISS & LangChain for context-aware Q&A with accurate source citation from large documents.
- Developed a multi-modal document processing system (PDF + OCR via pytesseract) with an AI-driven risk classification engine for legal clause analysis.
- Optimized LLM performance using Groq API and implemented full-stack architecture (React + JWT auth + MySQL) for fast, secure, and scalable user experience.

SnapDB | Java, MySQL, Postgres

- Created a CLI - based tool to take timestamped dumps for Postgres or MySQL.
- Can automatically compress and store the backup file using this command.
- Designed to be run from cron, CI pipelines, or ad-hoc from your workstation

Skills

-
- **Languages:** Java, Python, Javascript, SQL
 - **Backend:** Springboot, Flask, MySQL
 - **Tools:** Apache Kafka, Redis, Docker, ElasticSearch, Kibana, Terminus
